

Attach-A-Puller

Portable powered battery changer for medium sized fleets of batteries

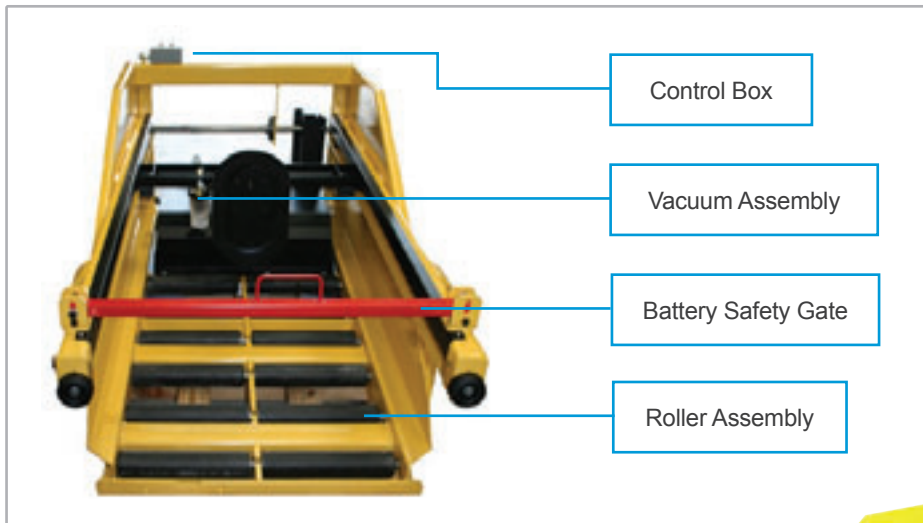

Manual handling of industrial batteries can be dangerous as well as time consuming. Many health and safety policies now require that equipment is used when handling heavy items. Manually changing a large amount of batteries can be time consuming and very costly, and when changing batteries frequently with unpowered systems it can become exhausting.

The Attach-A-Puller is a portable powered battery transfer cart that can be mounted to any powered pallet truck with suitable forks. The Attach-A-Puller is ideal for 10 to 40 battery changes per day and is operated from the easy to use joystick controls. The unit is powered from the pallet truck battery, so no additional power source is needed. The Attach-A-Puller can be ordered with convenient fork pockets for use on multiple trucks.

The Attach-A-Puller has an electromagnetic attachment to safely transfer the battery back and forward. The adjustment height of this unit is dependent on the pallet truck on which it is mounted, and keeps the cost of battery changing to a minimum by adapting to existing equipment.

When changing a medium sized fleet of batteries in a charging room, the Attach-A-Puller is the answer. The Attach-A-Puller is the heavy duty solution to handling problems associated with battery charging. It is the safest and most cost effective way to change industrial batteries with a portable powered unit.

The quick and safe method for changing medium fleets of batteries

Models available

To find out which of our available models suits your application best then please contact your local Philadelphia Scientific dealer.

Rugged design

- Heavy gauge steel frame construction
- Acid resistant powder coat finish
- Heavy duty rollers
- Steel mechanical battery latch
- Bipolar heavy duty electromagnet

Safety features

- Hydraulic powered push/pull mechanism
- Positive battery safety stop latch
- Safety hook
- Simple to operate
- Magnet safety timer

Benefits

- Reliable, powerful and consistent battery attachment
- Provides quick and safe battery changing
- Long and reliable working life
- Eliminates need to manually handle batteries
